

**Podcast:** Artificial intelligence

**Name:** Mohammed Aljabri

***Do you know what AI means?***

### **Summary**

In computer science, artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans. And that's what AI is.

Hi everyone I'm Mohammed Aljabri from ELS podcast and it is about AI which means Artificial intelligence. People think AI it's the future and i think too because so far, AI has ended a lot of jobs like factories jobs. It was replaced with machines that work by AI. also, it will take more jobs such as pilots, as you know now the pilot only job is take off and landing, so in the future they won't be needed.

Artificial intelligence is how the machines learn things without humans interfere. For example, autopilot or auto driving is based on AI. Also the suggestion that showed to you like on youtube or netflix. Netflix knows your taste in movies and tv shows based on your history and what you have watched before. People are afraid of AI because it's continuo to improve itself. And one of these people is the CEO of both tesla and space x, elon musk. He is afraid of that idea that AI robots may be smarter than humans. So based on that idea he started a project to flip that. The project is to use AI to enhance human intelligence and its called neuralink, and it will start in 2020. And since I mentioned netflix, there is a show called the100 on netflix that describe how AI can take a decision based just on science without considering the moral consequences.

For me i'm excited about what the future has for AI. however, I'm also afraid that governments may use it based on "AI knows better". But even if that happens it won't be in the near future. And one last thing, if you are still lost, I recommend that you watch a TV show called "Black Mirror" after that you'll know what I mean.
